ABSTRACT

Most of the software products are developed as per the client's requirements. The most important is that the underlying technology changes and advances so frequently and rapidly that experience of one product may not be applied to the other one.

All such business and environmental constraints bring risk in software development hence it is essential to manage software projects efficiently. It is an essential part of software organization to deliver quality product, keeping the cost within client's budget constrain and deliver the project as per scheduled.

There are several cost parameters like total time, total effort, size, total functions, technology, product reliability, security and product complexity, which may influence on Project Estimation. With correct estimation, project managers can manage and control the project more efficiently and effectively.

STUDY OF ACCIDENTS AND VARIOUS INJURIES IN AHMEDNAGAR CITY

Dr. Murari Premnath Sharma

(Associate Professor)

1.1 Abstract

The main focus of my study is to find out the major injuries by road accident in Ahmednagar City Area. The main purpose of this study is to find different injuries like head injuries and other body injuries which is dangerous for life. In various incidents we lost our memory, body parts and become a permanent disability and in some cases even we lost our life. All of us beware of the various diseases and we get vaccination but in case of accident we could not make any vaccine. It requires awareness and accident risk management before or after the accident. The head injuries is top most serious as compared to body injuries. This study focuses on precaution management techniques before and after the accident. This also helps to minimisation of injuries and fast treatment which help to injure person to recover fast. In Ahmednagar city majority of the accidents happen due to negligence of the driver/ rider/ and pedestrian. There are many people who don't follow the traffic rules while driving, it is necessary to realize them the consequences of non-wearing of helmet and breaking the traffic rules. For achieving the objectives, I collected the accident related information for the period of 1st June 2018 to 30th November 2018 Hospital. From hospital we collected the information about number of accident cases admitted to their hospital.

1.2 MEANING&DEFINITION OF ROAD ACCIDENT-

The creation of word accident is started from the Latin verb "accidere", signifying "fall upon, befall, happen by chance. The meaning of accident is happen unexpected or unplanned or in its ordinary or popular sense, the word may be defined as some unexpected and sudden event taking place without expectation, upon the instant, rather than something that continues, progresses or develops; something happening by chance; unexpected, extraordinary, something unforeseen, unusual, or phenomenal.

In the views of insurance terminology, an accident is the events which are not deliberately or plan caused, and which is not inevitable. For example, if a person who drive (who is covered under personal automobile insurance for injury and loss due to negligence) willfully drives the vehicles into a tree or big dig, the resulting injury or loss
